## Virtual Talks

At 6.00pm 10<sup>th</sup> of February –  
For approx. 1.5 hrs

### SIR IAN DIXON SCHOLARSHIP 2021 PRESENTATION EVENING

**Scholar:** [Mackenzie Thompson](#)

**Research Title:** A Building for the Builders, what is the Value of the Welfare Facility?

The welfare facility has been a long-overlooked aspect of the construction site. A vital area for workers to rest and relax but lacking innovative ideas. This study questions what happens when we do pay attention to the welfare facility. The aim is to increase awareness of this architectural typology and to assess its value. The findings demonstrate that good welfare facilities benefit the site-worker, contractor and client. The welfare facility is a tool to improve morale, productivity and well-being. In the construction industry, individuals need to take more responsibility for welfare facilities. This responsibility is not only in provision but in maintenance. When a company is looking at best practice, the welfare facility should be considered an investment area.

**Research Title:** How designers can best support the construction industry to efficiently and effectively design and deliver the best value outcomes for infrastructure clients.

Delivering high quality infrastructure is a priority for the UK government. It underpins productivity, competitiveness and the quality of life for the UK's population. Furthermore, if these projects are correctly designed, they can create value that goes beyond their core function and have the potential to positively transform our cities, environments and deliver a significant improvement in our everyday lives. The research aims to examine the design process for large scale infrastructure projects and how stakeholders, designers and contractors can collaborate to deliver best value outcomes. It outlines the wider environmental, economic and social value which large scale infrastructure projects can deliver. Through desktop analysis of current practice, it investigates the processes whereby a broad range of stakeholder requirements is developed into a brief and delivered through to construction. In doing so it identifies emerging themes which serve to prevent the full value of infrastructure being realised.

**To be held via ZOOM on a screen near you**

Scholarship Sponsored by WCC and CIOB
